

CBTS Acquires Recovery Point Systems, Expanding Enterprise Disaster Recovery, Cyber Resiliency, and AI Infrastructure Hosting Capabilities

News summary

- Acquisition adds enterprise-grade DRaaS and cyber resiliency to the CBTS solution suite
- Strengthens the company's mission to help clients modernize, secure, and protect their most critical operations
- Recovery Point has been recognized in the 2025 Gartner® Market Guide for Disaster Recovery as a Service (DRaaS) for 6 consecutive years, most recently as an Evolved Traditional Disaster Recovery Provider in the 2025 report.¹

CINCINNATI, OH - September 10, 2026 - [CBTS](#), a leading provider of AI-ready infrastructure, cloud, and security services, today announced the acquisition of Recovery Point Systems, a nationally recognized leader in fully managed and orchestrated Disaster Recovery as a Service (DRaaS) and cyber resiliency solutions developed specifically for enterprise IT environments.

Recovery Point brings enterprise-grade DRaaS capabilities to the CBTS portfolio, backed by Tier III, fiber-dense data centers that are owned, operated, and expansion-ready. Those same facilities power Recovery Point's managed data center colocation offering, which provides clients with a single partner for infrastructure hosting, resilience, and recovery at scale.

As AI workloads drive exponential growth in data volume and infrastructure demand, enterprises need resilient, scalable environments they control, without the capital burden of building their own.

"Resilience is now a board-level obligation, not an IT project. With Recovery Point, CBTS delivers what enterprises increasingly demand: a trusted partner who can modernize their infrastructure, secure it, and recover it end-to-end, under pressure, with measurable outcomes," said CBTS CEO Kristin Russell. "We didn't acquire Recovery Point to add a service line. We acquired them because the future of enterprise technology requires it."

The acquisition of Recovery Point is a clear, logical, and value-creating move for CBTS. It fills a gap in the CBTS solution suite, responds to documented and growing client demand, and brings specialist capabilities that are immediately deployable across the existing client base. Combined with the scale, relationships, and market presence of CBTS, Recovery Point's expertise in fully managed disaster recovery and cyber resiliency will create a more resilient, differentiated, and compelling offer for enterprise and government clients.

AI-ready infrastructure demands performance, protection, and recovery

Organizations today face concentrated cybersecurity risk as they rely on hyperscale cloud, interconnected SaaS applications, new AI tools, and external development pipelines. Even small outages can create massive business disruptions. Nearly 30% of security teams now take more than a full day to resolve a single incident, highlighting the growing gap between threat velocity and response capability.²

A unified solution for modernization, security, and guaranteed recovery

Together, CBTS and Recovery Point create a more comprehensive, enterprise-ready solution that spans cloud, infrastructure, AI, security, and now best-in-class disaster recovery and resiliency services. With Recovery Point, CBTS now delivers a single, integrated solution that combines:

- End-to-end modernization, security, and recovery
- Fully managed DRaaS with orchestrated execution and measurable SLAs
- Ransomware Recovery as a Service (RRaaS) with the addition of AI-powered Backup Validation
- Cyber resiliency across hybrid, multi-cloud, and legacy environments
- Recovery testing and performance assurance as standard practice
- Tier III, fiber-dense data centers: owned, operated, and expansion-ready, delivering the foundation for infrastructure hosting, resilience, and recovery under one roof

"Recovery Point was built to deliver fully managed and orchestrated recovery for the environments enterprises depend on most," said Jack Dziak, CEO, Recovery Point Systems. "With CBTS, our clients gain access to a full range of enterprise technology platforms, and CBTS gains a proven partner in cyber resilience. Together, we set a new standard for what clients can expect from a single trusted provider."

Bank Street Group LLC served as exclusive financial advisor to Recovery Point Systems in connection with this transaction.

About Recovery Point Systems

Recovery Point is a specialized provider of end-to-end recovery and continuity solutions. As a nationwide leader in data protection, cyber resiliency, and business continuity services, Recovery Point serves organizations ranging from Fortune 500 enterprises to SMBs, as well as federal, state, and local governments. Recovery Point delivers a fully managed recovery lifecycle across complex, multi-platform environments, including legacy and mainframe systems. This approach spans plan development, testing, and governance to ensure organizations can recover with confidence across any technology environment. For more information, visit [Recovery Point](#).

About CBTS

CBTS is a leading technology services company that designs, builds, and operates resilient technology foundations for mid-market and enterprise organizations across North America. Offering expertise in AI, data, applications, platforms, and security, CBTS combines the technical depth of a large integrator with the flexibility and client focus of a specialized partner. Founded in 1994 and headquartered in Cincinnati, Ohio, CBTS and its OnX Canada division serve more than 3,000 clients. CBTS has been named CRN Tech Elite 250 for seven consecutive years and ranks #49 on the CRN Solution Provider 500. Learn more at cbts.com.
